CoreTrustSeal Newsletter 03-2023

Shorter timelines for applications still running under the 2020-2022 requirements

The timelines for applicants and reviewers have been made shorter. Applicants now have a maximum of 2 months to respond to the reviewer comments. Reviewers have 1 month to respond to the applicants changes. This way we hope to get the applications under the old requirements out of the way as soon as possible.

If it is not possible for the applicant to respond within two months they are offered to be moved to the new requirements form and will get the remainder of the rounds left on their application under the [Requirements 2023-2025](#) at no extra costs. More info on the max amount of rounds can be found [here](#).

CoreTrustSeal Discussion Paper on Curation & Preservation Levels

The CoreTrustSeal Board is still welcoming community comment on the [discussion paper on Curation & Preservation Levels](#). These can be shared with us through our [Contact page](#) or on [Twitter](#).

Application Management Tool (AMT)

The [Application Management Tool \(AMT\)](#) has been launched in the beginning of February. Unfortunately some bugs came floating to the surface but we have been working very hard to fix them.

Access to the tool: Users of the old tool have to reset their password. This did not always go as planned, but is now sorted! If you are still having problems with accessing the tool please contact info@coretrustseal.org

Data migration issues:

- Applications that need to be revised by the applicant do not have the correct reviewer responses with them (information is missing). The affected applicants have all been contacted via email and sent the correct reviewer data. The secretariat will correct the reviewer data in the tool once a new version is submitted by the applicant.
- The links mentioned in the applications the old tool have not been added to the new tool correctly. Applicants are requested to move their links to the separate field provided in the new tool when resubmitting their application. Instructions can be found in the manual in the top left hand corner of the tool or [here](#).

Review due date: Reviewers did not get the emails informing them of a new submission from applicants and their new review due date. All reviewers have now received the correct emails with the due dates. If you cannot make a review date please contact info@coretrustseal.org and they will change the date to a more convenient time.

Please don't hesitate to contact info@coretrustseal.org if you have further feedback or suggestions for the tool!

FAIR-IMPACT Open Call for Support coming soon

“How can I practically apply the FAIR Principles in my work? How do I know what is the right FAIR-enabling tool for me?”

In an effort to help people answer these questions and to navigate the complexities of finding the right resources for different use cases, the FAIR-IMPACT project will be launching the first of three Open Calls for Support in April 2023. For this first Open Call, they will be offering two defined support actions designed to enhance the FAIRness of data, semantic artefacts and data-related services. More information in their [blogpost](#).
